

MOHAMED RIFFATH

Software Engineer — React.js, Node.js, Laravel, Spring Boot (Java)

Dubai, UAE | +971 50 647 1697 | riffath.emedia@gmail.com

[linkedin.com/in/riffathrhm](https://www.linkedin.com/in/riffathrhm) | github.com/riffathRHM | riffath-portfolio.vercel.app

Nationality: Sri Lankan | Languages: English, Tamil, Sinhala | Currently in Dubai on a visit visa, immediately available once status changes

PROFESSIONAL SUMMARY

Developer with 4+ years of production experience building REST APIs, authentication, and database-backed features across mobile and web, inside professional engineering teams at Elegant Media and Cherry InfoTech. Alongside that, built and shipped backend systems independently in Node.js/Express and Spring Boot (Java), and React.js frontends, across several full-stack projects covering CRUD APIs, JWT auth, relational and NoSQL data modeling, and payment integration. Replaced a manual release process with Docker and CI/CD, cutting deployment time 87%. Comfortable moving between frontend, backend, and mobile — the underlying problems (API design, data modeling, auth, performance) are the same regardless of the stack. Open to junior and mid-level React.js, Node.js, or Spring Boot roles in the UAE.

CORE SKILLS

Frontend: React.js, JavaScript, TypeScript, HTML, CSS, Redux

Backend: Node.js, Express.js, Spring Boot, Java, PHP, Laravel, Python, RESTful API Design, JWT/OAuth

Databases: PostgreSQL, MySQL, MongoDB, Firebase Firestore, SQLite

Mobile: Flutter, SwiftUI, React Native

Tools & Cloud: Git, GitHub, Docker, CI/CD, Postman, AWS/GCP

Practices: Agile/Scrum, MVC, MVVM, OOP, Layered Architecture (Controller/Service/Repository), Unit Testing

KEY PROJECTS

Customer-Item API (Spring Boot)

Java, Spring Boot, JPA/Hibernate, REST API

github.com/riffathRHM/Customer-Item

- Built a Spring Boot REST API for managing customers and items, structured into controller, service, repository, DTO, and entity layers.
- Used Spring Data JPA for persistence and mapped request/response payloads through DTOs to keep the API contract separate from the data model.

Full-Stack Food Ordering Platform (MERN)

React.js, Node.js, Express.js, MongoDB, JWT, Stripe

github.com/riffathRHM/foodDelivery MERN

- Built a React.js frontend with dynamic cart management and live order status, backed by a Node/Express/MongoDB API.
- Implemented stateless JWT authentication with refresh token rotation, and Stripe for checkout.

Offline-First Task Manager (SmartTask-Pro)

Node.js, Express.js, TypeScript, PostgreSQL, Drizzle ORM, JWT, SQLite, Docker

github.com/riffathRHM/SmartTask-Pro

- Built a Node/Express/TypeScript API backing a task manager that works fully offline, with a local-first SQLite layer on-device.
- Designed a background sync engine that reconciles offline changes with PostgreSQL once connectivity returns.
- Implemented JWT authentication with persisted, validity-checked sessions.

Multi-Vendor Marketplace (Backend + Admin Panel + Flutter App)

Node.js, Express.js, MongoDB, Stripe, JWT, REST API

Backend: github.com/riffathRHM/multistore-backend | Admin Panel: github.com/riffathRHM/multistore-admin | Flutter App: github.com/riffathRHM/multistore-flutter

- Built a full-stack multi-vendor marketplace API from scratch: vendor onboarding, product catalogue, cart, order tracking, and Stripe checkout.
- Designed role-based access for 3 user tiers, backed by a JWT-secured, 20+ endpoint REST API.

PROFESSIONAL EXPERIENCE

Mobile Engineer — Native iOS / Flutter — Elegant Media Australia

Jun 2024 – Jul 2026 (2 yrs 2 mos) | Remote, international clients

- Integrated REST APIs, authentication, payment gateways, and third-party SDKs across a portfolio of live production apps.
- Replaced a manual release process with Docker-based build environments and CI/CD automation — deployment time dropped 87%.
- Debugged production issues — memory leaks, slow API calls, data sync bugs — and prioritized fixes by user-facing impact.
- Worked in Git-based, pull-request-driven Agile sprints alongside backend engineers, designers, and QA.
- Shipped production apps consuming REST/JWT-secured APIs: TeeTime NZ (Stripe payments, OAuth), FitBlazer (Firestore, Firebase Cloud Messaging), and How Did You Survive (REST APIs, Apple Sign-In).

Mobile Application Developer (Flutter/React Native) — Cherry InfoTech

Jun 2022 – Jun 2023 (1 yr 1 mo) | Doha, Qatar — Remote

- Integrated RESTful APIs, real-time data sync, and secure payment gateways for enterprise mobile banking features, contributing to a 30% increase in active users.
- Worked with backend and cross-functional teams to define API contracts consumed by the mobile app.
- Cut app load times 25% and reduced crash rates through targeted performance work.
- Contributed to CI/CD automation and unit, widget, and integration testing as part of the Agile process.

Mobile App Developer & Graphic Designer — Fiverr (Freelance)

Jan 2022 – Present | Remote

- Built apps end to end for freelance clients, including REST API integration, Firebase, and authentication.
- Owned client engagements start to finish: requirements gathering, design, development, and delivery.

EDUCATION

Bachelor of Science in Computer Science

University of Jaffna, Sri Lanka | September 2020 – October 2023

CERTIFICATIONS

- Spring Boot for Back-end Development — Springboot Academy — Issued Jan 2020
- Data Structures & Algorithms — Udemy
- IEEEExtreme 15.0 Competitive Programming Certificate
